

Dextra

EMPLOYEE STORY

Detchana, Process Engineer

- Bachelor Degree in Aerospace Engineering from KMUTNB (King Mongkut's University of Technology North Bangkok)
- 4 years at Dextra Manufacturing

“As Dextra engineers, we are enterprising, innovative and passionate about what we do.”

Engineering profession is multi-faceted and requires a wide range of skills and expertise

I'm Detchana. I graduated in Aerospace Engineering from KMUTNB (King Mongkut's University of Technology North Bangkok). To work as an engineer is my dream. For me, the engineering profession is multi-faceted and requires a wide range of skills and expertise - in industry and many sectors, from design to production and operating equipment or a product, the engineer is involved throughout the process.

Before joining Dextra Manufacturing in 2014, I worked in the Electronic and Automotive field. From working experience, Engineering has taught me logical and systematic thinking and to apply to whatever my assignments are. At Dextra, I felt like I belonged from day one.

At the beginning during my first year at the company, my work was about process improvement, production line layout and small machine installation. Regularly, I got the good advice from my manager. Eventually I got a golden opportunity from my ex-manager, to be assigned to another forging machine project. This is the big challenge of my career here!

Until now I've worked for Dextra Manufacturing for 4 years as a Process Engineer. Right now my main duty is to take care of new machines and production line, also to handle the process of made machinery requirements, project scheduling and machine installation.

There is no stupid question at the workplace. Everybody in the team can ask the questions and share their ideas.

Thanks to Dextra's unique culture, we encourage the spirit of entrepreneurship and innovation.

Recently, I travelled to Taiwan and Korea with my boss. We checked the machines and its readiness before we import them to the plant. It's not easy to make a go or no go decision, we endeavor to do our best.

You cannot work successfully without a team

I am proud to be a part of the team because we see what we are accomplishing together. I was given the chance to develop my knowledge and skill and to share my valued creation with the team. After the business trip we will always have a party and hang out together. I'm an outing trip leader.

At Dextra, Job ALWAYS teaches you

Since we are doing many projects on production, my duties are to control project scheduling and how I can keep it on track. Whenever a project becomes late, it is my greatest challenge to bring the project back on track by working with many parties.

As Dextra engineers, we are enterprising, innovative, and passionate about what we do. We keep developing our hard and soft skills to become a global leader in engineering and manufacturing for the construction industry. Things are getting more challenging but the great teamwork makes us confident and proud to see the company's achievement for more than 10,000 projects worldwide.
